

## Natural Physics Global Outreach Activities

- Natural Physics Global Outreach will organize and coordinate the programs in collaboration with Agencies in developing and developed countries.
- Natural Physics Global Outreach will address the outreach-related observations and recommendations of the HSTI Working Groups.
- The activities will be derived from the space-related areas in which UN-OOSA is actively involved as contained in the Program on Space Applications.
- The activities will include, but not be limited to, customized space education outreach programs modeled on the global outreach methodology used for the National Workshop on Astronomy for Teachers.
- Representatives from identified target groups such as stakeholders, decision makers, CEOs, government officials, gender equality, teachers, students, and the general public, will be invited to participate in the workshops.
- The level of the material presented will be commensurate with that of the participants, and will be presented in such a way as to be educational, entertaining, and motivational.
